

Senior Data Engineer

Requirements

- 5+ years of experience in software engineering, data engineering, or a related field
- Strong experience with the modern data stack (e.g. Airflow, dbt, Snowflake or similar)
- Proficiency in Python and SQL
- Experience designing and maintaining scalable ETL/ELT pipelines
- Excellent communication and cross-functional collaboration skills

Preferred

- Experience with real-time streaming systems (e.g. Kafka, Flink)
- Familiarity with cloud data warehouses (BigQuery, Redshift, Snowflake)
- Prior experience mentoring junior engineers
